Supplemental material. S2. a) E-cadherin promoter was transiently transfected in MCA3D cells and the activity was measured in the presence of Snail or ΔSNAG mutant (100 ng) in the absence or presence of LOXL2 or LOXL3 cDNAs (300 ng). b) HA-tagged Snail-wt or Snail-K98R-K137R-HA were transiently transfected in HEK293T cells and detected in mSin3A immunoprecipitates using anti-HA antibodies. Observe the strong reduction of the interaction between mSin3A and Snail- K98R-K137R-HA mutant.
