SUPPLEMENTARY INFORMATION

FIGURE S1. Selected views of Vav3 (A,B), pY-Vav3 (D,E) and Vav3 (1-144) (G,H) reconstructed volumes before (A,D,G) and after (B,E,H) fitting the atomic structures of the indicated domains into the EM density. In order to visually support the quality of our models, the resulting fittings for Vav3 (C), pY-Vav3 (F) and Vav3 (1-144) (I) were low-passed filtered at a resolution identical to that of the EM reconstructions (22 Å). A close resemblance between the 3D experimental volumes and the fitted models is observed at this resolution. Please, bear in mind that some parts of the reconstructions (those corresponding to the interdomain linker regions) have not been fitted with any atomic data.
