Figure S3: Rad4 stability is not altered in a $\Delta$rad23 strain. Pulse chase treatment with $^{35}$S labeled methionine followed by immunoprecipitation with anti-Rad4 antibody. (S-supernatant P-Pellet) A) WT B) $\Delta$rad23 (Reduced levels of Rad4 in the $\Delta$rad23 strain accounts for the higher background in the $^{35}$S exposure) C) Quantitation of data from A and B (normalized against Rad4 levels)
