Fig. S5. Origin association of Sld3 in different cdc2 mutants

Aliquots of nda3-KM311 cdc2-M26 and nda3-KM311 cdc2-L7 derivatives carrying sld3-flag cdc45-myc, psf2-flag or cut5-flag were synchronized and used for ChIP assays as for Fig. 6. Mcm6 and Sld3 localized to the ars2004 origin with either cdc2 allele, whereas Cdc45, Psf2 or Cut5 was not.
