Supplementary Figure 9. Localization of Rab7(Q67L) in wildtype and lamp-1−/−/lamp-2−/− fibroblasts. Wildtype (A, C) and lamp-1−/−/lamp-2−/− (B, D) were transfected with cDNA encoding GFP-Rab7 (A-B) or GFP-Rab7(Q67L) (C-D). After 24 h, images of the fluorescence of GFP were acquired. Insets represent enlarged portions of the cell.
