Supplementary Dataset II. Whole chromosome data for Rpb3-IP, Hpr1-IP, and Sub2-IP ChIP-chips performed in this study. Rpb3-IP, Hpr1-IP, and Sub2-IP patterns as histogram bars in the y axis show the average signal ratio of loci significantly enriched in the immunoprecipitated fraction along the indicated regions in log2 scale. The x axis shows chromosomal coordinates. Positions of ARS elements are indicated. The horizontal bars mark the positions of the indicated ORFs.
