Source Data for Figure 6

Original scans for Figure 6A:

anti-H2B:

‘5’ represents armEx149, ‘16’ represents armEx152. These numbers correspond to the line number. The right two lanes were not included in the Figure, but serve as a replicate and control for the depletion of H2B upon csr-1(RNAi) in eri-1(mg366) as indicated. The lower band is non-specific and was not included.

anti-actin:

The above Western was re-probed for actin.
