Figure 3B

- **Figure** shows a gel electrophoresis with samples labeled as FUS WT, FUS R521C, FUS P525L, and IgG. The gel is stained with Ponceau and has molecular weight markers in kilodaltons (KDa).

- The right side of the figure shows a western blot with antibodies against Drosha, highlighting bands corresponding to different FUS protein variants.

- The gel and blot are used to compare the expression and migration of FUS protein variants under different conditions.
