**Figure S6. Orf1p distribution in telomere mutants**

Whole mount staining of Orf1p in three mutants with their respective heterozygous controls (wt). The bottom left inserts show images of single Orf1p-positive nuclei, which were taken at a higher magnification (a scale bar of 5μm is given). In the insert for *su(var)205* (HP1), note the large size of Orf1p spheres. In the insert for both *ver* and *ver*[^342], note a prominent nuclear background of Orf1p that lacks spheres.
