Figure S5. Expression of miR-135b during neural differentiation of hESC

A. Expression of miR-135b and PAX6 during the differentiation of H9 ESC to NEC by the 2i method. B. Expression of miR-135b in NEC differentiated from H1 and H9 hESC by the 3i method. MiR-135b expression was quantified by quantitative RT-PCR using TaqMan assays. PAX6 expression was quantified by SYBR green. All Error bars shown indicate s.e.m (n=3 independent experiments).
